Revised Lake Treatment Application Update

Our consultants, Restorative Lakes Sciences (RLS) surveyed our lakes for the invasive weed species Eurasian Water Milfoil (EWM) on Wednesday May 8, 2013. The revised results of their survey is attached below. We have been informed that our applicator, Aquatic Services, Inc. (ASI) will be treating our lakes **Tuesday June 4, 2013**. RLS has recommended using the same chemical that was used last year, "Triple Play", a contact herbicide, which will also prove beneficial with the algae experienced this year. Our funding allows for use of this chemical with a balance to further treat later in the year. Per the white "Aquatic Pesticide Treatment Notice" that everyone in the district received earlier, there would be no swimming or bathing or irrigation for 24 hours (except for established grasses for which there is no restriction for using the treated lake water). You will see the yellow letter size notices similar to last year posted on shore near all application areas with pertinent information about the chemical and its effects. This supersedes the previous notice.
